		Term 1	Term 2	Term 3	Term 4	Term 5	Term 6
Year group	Knowledge organiser	<a href="#">Animals Including Humans</a>	<a href="#">Forces and Magnets</a>	<a href="#">Rocks</a>	<a href="#">Light</a>	<a href="#">Plants</a>	
3	Enquiry Question and Unit Aim	How do our skeletons and muscles work together to help us move?	Why are some materials magnetic and others not?	Describe the 3 processes of rock formation.  Children can describe rock formation.	Why do shadows form? Explain why using scientific vocabulary.	Describe the different parts of a plant and explain what they need to grow.  Children can identify different parts of plants.	

## Science Long Term Plan KS1 & KS2

		Children can describe how our skeletons provide a strong framework for our bodies, while our muscles give us the power to move.	Children can explain what makes a material magnetic.		Children explain how and why shadows form.		
	National Curriculum Programme of Study	Identify that humans and some other animals have skeletons and muscles for support, protection and movement.	Compare how things move on different surfaces.	Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties.	Recognise that they need light in order to see things and that dark is the absence of light.	identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers.	Investigate the way in which water is transported within plants.
		Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat.	Notice that some forces need contact between two objects, but magnetic forces can act at a distance.  Observe how magnets attract or repel each other and attract some materials and not others.	Describe in simple terms how fossils are formed when things that have lived are trapped within rock.  Recognise that soils are made from rocks and organic matter.	Notice that light is reflected from surfaces.  Recognise that light from the sun can be dangerous and that there are ways to protect their eyes.  Recognise that shadows are formed when the light from a light source is blocked by an opaque object.	Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant.	Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.

## Science Long Term Plan KS1 & KS2

			<p>a magnet, and identify some magnetic materials.</p> <p>Describe magnets as having two poles.</p> <p>Predict whether two magnets will attract or repel each other, depending on which poles are facing.</p>		way that the size of shadows change.
